

Application No. 10/065,437
Amendment. dated August 12, 2003
Reply to Office action of May 14, 2003

Amendments to the Specification:

Please replace paragraph [0017] with the following amended paragraph:

[0017] Now referring to the drawings wherein like numerals refer to like matter throughout, and more specifically referring to Figure 1, there is shown a system of the present invention ~~generally designated 100~~, including an industrial PC faceplate 102, having a front faceplate side 103, a top faceplate side 104, a differentiation plate void 106, having ear receiving voids 108 and 110.

Please replace paragraph [0018] with the following amended paragraph:

[0018] Throughout this description, the term "industrial PC" is used to represent a PC of the type which is capable of being stored in racks of multiple rows of PCs, where each row has multiple PCs and where the PCs are coupled to wiring associated with the rack and other equipment by at least one connector at the rear end ~~104~~ of the PC ~~100~~. This definition of industrial PCs is not intended to include laptop PCs which have a connector on the rear end of the laptop for coupling with a docking station or a port replicator. Consequently, the term "industrial PC" will specifically exclude any computer where the width dimension w is greater than three times the height dimension d and shall not include any PC which has along its top side a hinged display screen hinged along the rear end of the PC.
